- Full Featured
- Fully Integrated
- Easy to Use
- Easy to Implement
- Web-Enabled
- Customizable

## Why companies love PowerERP?

PowerERP is a flexible, state-of-art and comprehensive system that enables companies to fully automate their business with one software. The system helps in increased productivity, reduce labor and material costs, provide information plus ad-hoc inquires and analyses to support smart decision-making, thereby helping increase profits and yield greater returns for your investment dollars.

As a manufacturer or distributor, you understand that you are the most important link in the supply chain and a lot depends on your ability to deliver. You also understand the importance of business systems and how your technology choices can impact the viability of your business.

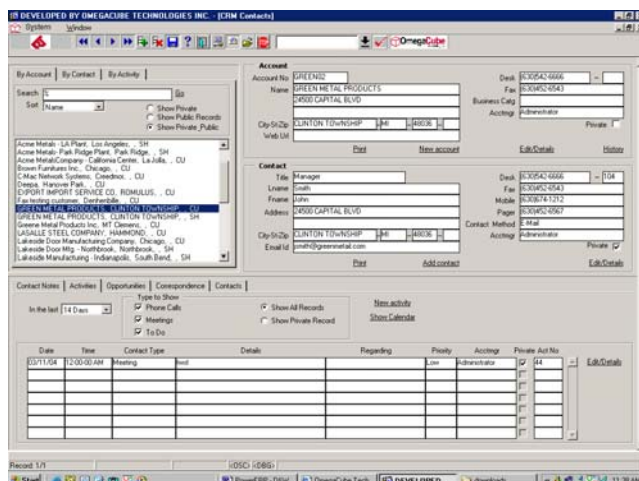

OmegaCube ERP Solutions drive efficiencies and cost savings over your entire supply-chain processes.

PowerERP is very simple to use while offering deep functionality. Our customers achieve full integration and gain efficiency in operations while increasing their sales. Some of the key architectural capabilities that allow such revenue and productivity gains are:

- **Configuration options** in the system allow you to implement your specific business processes in the software. As a result, you have one central system to handle all business management needs.
- **Easy to use system** allows you to train users quickly.
- **Expandability and Customizability** of the business components allow unique business requirements to be added to the system without massive programming effort.
- **Common data model** allows information to be entered once and shared consistently across various business functions.
- **Comprehensive and flexible reporting** allows access to information required to make better business decisions.
- **Automation steps** in the software help you increase sales while keeping staff requirements the same. The steps required to perform business functions are reduced by various options available in the system.
- **Comprehensive customer oriented applications** allow you to offer various ways for customers to do business with your company, allowing opportunities for revenue generation while keeping costs down.
- **Sophisticated Technology** allows you to have a robust infrastructure with minimal downtime, Low maintenance and unparalleled expandability.

## CRM

- Increase sales call effectiveness and customer intimacy during all contacts points.
- Maintain information on accounts, contacts, and prospects with automatic updates from sales, marketing, customer service, accounting, order entry, inventory, and returns handling.
- Leverage an easy-to-use interface to provide a 360-degree view of relevant customer and enterprise data, navigate with ease, and obtain the information you need when you need it.
- Create and track follow-up activities and tasks for contacts and account sales.
- Predict future customer needs for successful cross-sell and up-sell opportunities.
- Streamline the lead-to-conversion process and move from reactive to strategic account management.

# Barcoding and Automated Data Collection

The system offers complete ability to use barcodes for transactions in real-time. Labels print directly from the software. Both corded and wireless barcode scanners are supported in the system. Using both types of scanners users can perform warehousing operations, job tracking, labor reporting, shipping and receiving transactions.

**Mobile Applications** - Let your sales reps take order entry and inquiry functionality on the road. Allow receiving and shipping department to perform their functions using wireless applications in real time. Other wireless applications include inventory transactions, and time reporting.

**E-mail/Fax** - Provide quick and paperless information to those that need it when the information is generated. Email or fax any report, listing, or document to customers, vendors, warehouses, or internal departments.

**EDI** - Reduce the handling and mailing of standard documents with customers and vendors using Electronic Data Interchange (EDI). Various transactions including Pos, releases, shipment notices and invoicing can be done using EDI.

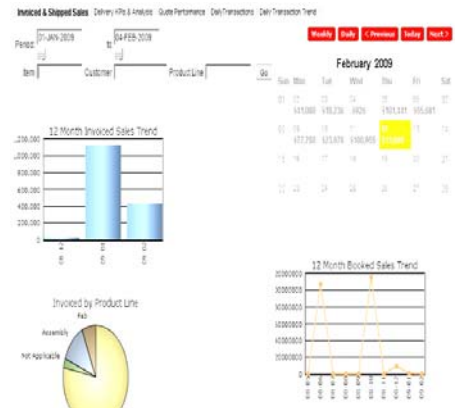

# Dashboards & Portals

This unique offering in PowerERP allows our customers to leverage the web to provide executive and operational reporting and automate the supply chain. Customers, suppliers, employees and other business partners can interface and transact business efficiently using this approach.

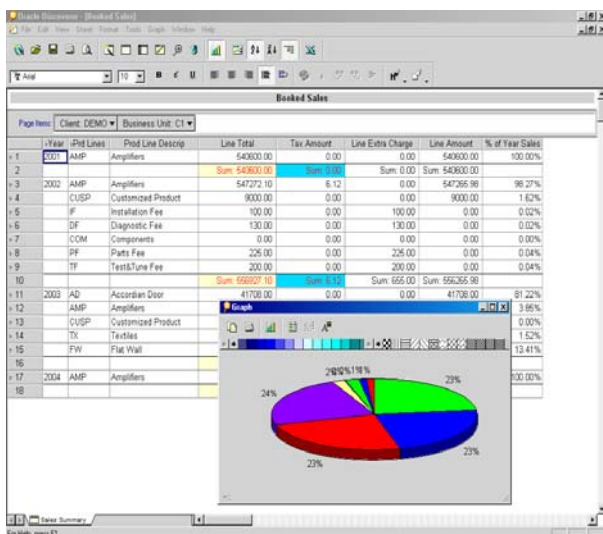

**Dashboards** - Executive and operational dashboards provide real-time pulse of the entire business including key action items and trends. The information is accessible from any internet capable device. End-users can build new dashboards with a wizard based tool.

**Customer Portals** – Allow your customers to process orders, download shipment and invoicing history, maintain shipping addresses, track job statuses, browse product catalogs using customer portals.

**Supplier Portals** – Allow your suppliers to receive RFQ, download purchase orders, provide shipment statuses, provide new item inventory, maintain consignment inventory using supplier portals.

# Business Intelligence & Analytics

A large catalog of standard reports is included with our solution. Also a powerful, flexible ad-hoc inquiry and reporting tool is included for special customized analysis you may wish to perform. PowerERP analytics let you:

- Utilize your company's data to the fullest. Create your own virtual databases, virtual tables, charts and graphs..
- Know what items were sold, to whom, and when. Allows multiple views of the data, such as sales history by sales representative, customer, and item. Track and analyze any historical data.
- Perform multidimensional reporting and analysis of consolidated data with drill-downs to details.
- Make better decisions by analyzing sales, inventory, vendors, customers, and enterprise demand.
- Monitor performance using advanced financial reporting and budgeting capabilities.

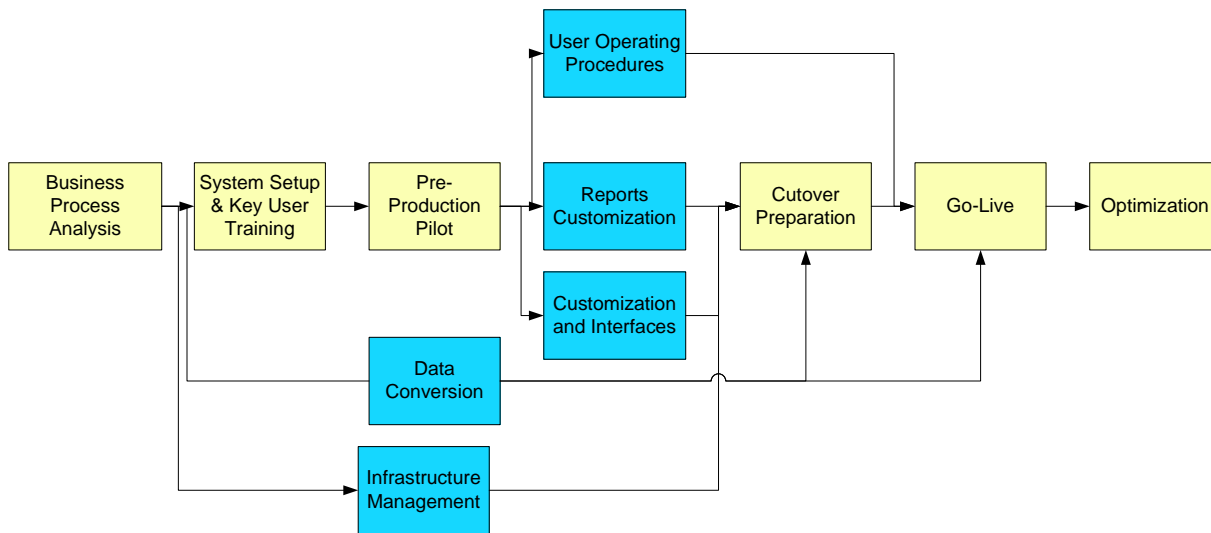

# Software Implementation & Training

Omegacube's implementation services ensure that you are able to leverage full ERP benefits quickly. The best software can't be fully utilized if not implemented properly. The unique implementation methodology from Omegacube helps in making sure the software meets your business objectives in a timely manner.

The first step in the implementation involves business process analysis. The objective of this step is to develop an understanding and a blueprint of the business process that specifies the information flow and desired automation. This ensures that during system setup all the functions work as expected. Software training is a key step in the implementation. Using combination of on-site, classroom and online training users are quickly trained on how to use the system effectively.

This unique methodology has helped customers gain maximum advantage of the system while also automating key steps to gain efficiency in operations.

A sample implementation roadmap highlights the key steps involved in an implementation.

## Not sure where to start? OmegaCube Can Help

Selecting an ERP system is a difficult process. You are sometimes expected to make a long-term commitment with little or no knowledge of software or hardware, the options available and long-term implications.

*“PowerERP system has helped us run our business better and gain efficiencies in areas where we didn't think we could. All our business data is managed in one system allowing us to quickly and accurately get the information we need to make good business decisions”*

*President  
Stamping Company in the Midwest*

choice your business may wind up being stuck with a dead-end system.

We offer free on-site survey to help you compare the pros and cons of the various alternatives and help you make the best choice of hardware and software for your business requirements. We will show you a flexible, state-of-the-art, easily customizable solution that helps your business grow to the next level.

Many competing ERP representatives may misrepresent their product as an ideal solution without really understanding your business needs. None of the software packages available in the market can satisfy 100% of your needs. Configuring and some customization are unavoidable. Older software products are difficult and expensive to customize. If you make the wrong
